

YOUNGJIN HONG

(763)388-7740 | hong0745@umn.edu | [LinkedIn](#) | [Google Scholar](#) | [Website](#)

RESEARCH INTERESTS

Vision-Language-Action Models, Multimodal Representation Learning, Generative Policies for Robotic Manipulation.

EDUCATION

University of Minnesota (UMN)

Ph.D. Electrical Engineering

Minneapolis, MN, USA

Sep. 2024 – Present

Sungkyunkwan University (SKKU)

M.S. in Mechanical Engineering

B.S. in Mechanical Engineering

Suwon, Korea

Mar. 2022 – Feb. 2024

Mar. 2016 – Feb. 2022

WORK EXPERIENCE

Robot Research Assistant [\[Website\]](#)

Choice Robotics Lab, University of Minnesota

Minneapolis, MN

Sep. 2024 – Present

- Conducting research on multimodal reasoning and generative refinement models for large-scale robot manipulation.
- Developing a VLM-based multi-person attribute-conditioned tracking system for real-time visual monitoring.

Robot Research Engineer [\[Website\]](#)

Hanwha Aerospace, Manned-Unmanned Teaming (MUM-T) Research Center

Seoul, Korea

Jan. 2024 – Jul. 2024

- Built Unmanned Ground Vehicle (UGV) simulation environments with Isaac Sim for vision-based autonomy.
- Contributed to a defense proposal for next-generation unmanned ground vehicle technologies.
- Performed field testing and piloting of an unmanned ground vehicle autonomy prototype.

SELECTED PROJECTS

Generative Residual Action Refinement for Manipulation (Ongoing Research)

Oct. 2025 – Present

- Building a Flow Matching-based generative refinement model that learns residual corrections to improve general-purpose manipulation policies.
- Benchmarking refinement architectures (Mamba-driven Flow Matching, CVAE) across diverse manipulation tasks.

Language-Action Cycles for Learning Manipulation Tasks

Jun. 2025 – Oct. 2025

- Proposed a bidirectional language-action cycle that jointly learns action-to-language and language-to-action mappings for scalable behavior acquisition.
- Designed a semantic consistency verifier for filtering self-generated samples, enabling reliable self-improvement.

Vision-Based Planar Pushing for Service Robotics (SKKU)

Jul. 2022 – Dec. 2024

- Developed a learning-based 2D non-prehensile motion planner for dishware with unknown physical properties.
- Automated synthetic train data using Isaac Gym simulator to train the push planning network.

SKILLS

Programming: Python (proficient), MATLAB, C++ (familiar) | **Tools:** Docker, Git, Linux

Deep Learning: PyTorch, HuggingFace, Generative Models, **Vision-Language Models (VLMs)**

Robotics: ROS, Isaac (Gym & Sim), Gym, MuJoCo, Coppeliassim

Courses: Intelligent Robotics, **Robot Vision**, **Deep Learning**, Reinforcement Learning, Image Processing, **Advanced Topics in Generative AI and Conditional Generation**, Optimization Theory
